segments and their appendages, ten of the New England species of *Corythucha* were separated. These were: *C. marmorata*, *C. cydoniae*, *C. pruni*, *C. arcuata*, *C. mollicula*, *C. ciliata*, *C. caryae*, *C. pergandei*, *C. pallipes*, and *C. ulmi*. The remaining species could not be separated: *C. heidemanni*, *C. juglandis*, and *C. coryli*.

Composition of the Ant Tribe Typhlomyrmicini. — In 1911, Emery (Gen. Ins. 118: 32) raised a subtribe of his tribe Ectatommini to include the genera Typhlomyrmex Mayr, Prionopelta Mayr and Rhopalopone Emery, and named this subtribe Typhlomyrmicini. It has already been proposed on morphological grounds that Prionopelta be removed to tribe Amblyoponini and Rhopalopone remain in tribe Ectatommini, while Typhlomyrmex has been seen as the sole group representing an isolated line (Brown, 1950, Wasmann Jour. Biol., San Francisco, 8: 243-244.) The tribal name Typhlomyrmicini is hereby placed in use to include the Neotropical genus Typhlomyrmex. Tribal distinction is considered to be complete.

The male specimen without head, doubtfully referred by me in 1950 (loc. cit.) to Prionopelta, is now definitely recognized as a Typhlomyrmex of unknown species. It appears characteristic of Typhlomyrmex males that vein Mf1 arises based of cu-a. Other characters of the genus and tribe will be brought out in a forthcoming key to the ponerine genera.

Examination of a cotype ("Zig-zag, Venezuela") of Forel's *Prionopelta marthae* (1909, Deutsch. ent. Zeitschr., p. 240, worker) in the Museum of Comparative Zoology shows that this species must be removed from *Prionopelta* and placed as a **new synonym** of *Typhlomyrmex rogenhoferi* Mayr (1862, Verh. zool.-bot. Ges. Wien 12: 737, worker; 1887, Ibid. 37: 538, § 3). Comparison was made with workers of *T. rogenhoferi* determined by Mann and Wheeler from Pará, Brazil (Mann *leg.*), and these proved closely similar. The *marthae* type differs distinctly from types of *T. pusillus* Emery and *T. robustus* Emery in the Museum of Comparative Zoology. — WILLIAM L. BROWN, JR., Museum of Comparative Zoology.
